현대 응용 영어 <Chemtrail>

1. Provide an overview(summary) of the topic (what it is...) define general background

Chemtrail, a portmanteau of "chemical" and "trail," refers to the conspiracy theory that long-lasting trails left in the sky by high-flying aircraft are actually chemical or biological agents deliberately sprayed for unknown purposes. The follower insists these trails, which are distinct from normal contrails formed by water vapor, are believed by some to be part of secret government programs involving weather control, population control, or biological warfare.

2. Explain a brief history about the topic. Past and present.

Chemtrail conspiracy theories began to circulate after the United States Air Force published a 1996 report about weather modification which titled "Weather as a force multiplier". And when Chinese government seeds clouds ahead 2008 Olympic ceremony essentially creating rain in other parts of the country to keep the stadium free of rainfall, many people started to believe the conspiracy about contrail might have an influence to people. And now, some people claim that the government is using airplanes to spray harmful chemicals into the air, utilizing these characteristics.

3. What about the topic might be true?

There are some arguments supporting the possibility that the chemtrail conspiracy theory might be true. During the Cold War, the British government conducted over 750 mock chemical warfare attacks, exposing hundreds of thousands to zinc cadmium sulfide. The government chose this chemical just for its small particle size and visibility under ultraviolet light, despite its potential cancer risks. Similarly, the US conducted tests in the 1950s and 1960s using the chemical to study biological weapon dispersion. These historical instances support the conspiracy theory. It is reinforced by instances such as the 2013 revelation that the CIA, NASA, and NOAA funded geoengineering research, fueling fears of governmental weather manipulation. Thus, historical precedents, governmental clarifications perceived as cover-ups, and media portrayal support belief in Chemtrails.

4. What about the topic might NOT be true?

The conspiracy theory followers often misinterpret flight test photographs, which show barrels used to simulate passenger weight, as evidence of aerosol dispersion. Also, misinterpretations of normal aircraft operations, such as fuel dumping or air disruptions in fog, are frequently cited as evidence. Additionally, a Louisiana TV report claiming that barium levels under chemtrails were dangerous was later revealed to be the result of equipment misuse. A follow-up report indicated that subsequent measurements showed safe levels. Viral videos claiming to show chemtrails often depict routine aviation phenomena. The former CIA employee Edward Snowden, stated that various air forces, universities, and scientific organizations had reviewed research about contrail and chemtrail but found no evidence that chemtrails are real.

5. Your opinion?

I believe that this conspiracy theory could have been very possible in the past when research ethics were not well-developed. Additionally, I think it is still possible today. In the past, when research ethics were underdeveloped,

almost anything could be experimented on. Especially during times of rampant racial discrimination, various chemical experiments were often conducted without the knowledge of the subjects, such as the syphilis experiments on African Americans. Therefore, I believe that chemtrails could have been a reality in the past.

And I think that chemtrails might still be true today because the numerous unethical experiments conducted in secrecy under the country. For instance, in the report on the U.S. dropping the atomic bomb on Japan during World War II, the phrase "to observe the effects of the bomb" was used instead of "operational deployment." Similarly, in 2006, former Russian spy Litvinenko died from radiation poisoning after drinking tea given to him by a former colleague. This incident suggests that powerful nations can conduct any experiment in secrecy. Thus, I think chemtrails could be secretly executed in relatively weaker countries, such as developing nations, even today.
